A  Reading comprehension

Read the following text about Martin and Carol.

Martin's dilemma

Carol and Martin were 16 years old. They were learning French at school, and they wanted to go to the French part of Switzerland in the summer holidays. They were going to stay with a family in Orbe. Their parents were going to pay for their tickets, and for their room and food in Orbe, but they still needed pocket-money. Martin managed to get a job at a filling station on Saturdays, and Carol found a job at a supermarket.

When the holidays came, Martin had 400£, and Carol earned the same, both were paid by check. Martin took the checks to the bank to change them while Carol was buying tickets. The exchange rate was two francs to the pound, that was 1600 francs all together. Martin wanted to get some small notes. The clerk changed the cheques, counted the money, Martin took the notes and the clerk turned to the next customer.

Martin left the bank, then stopped to look at the money: all new notes, one thousand-franc note, six hundred-franc notes, one fifty-franc note, two twenties and a ten-franc note. But wasn't that too much? Yes, one hundred francs too much. He turned to go back into the bank, then stopped and thought: “1600 francs isn't really very much pocket-money for two people. Why not keep the money? We could do more with 1700 francs – that's 850 francs for me and exactly the same for Carol. Perhaps I could tell Carol that the exchange rate was more than two francs to the pound.

Or must I give the money back to the bank clerk? The bank has so much money. One hundred francs is nothing to them. But what if the bank wants the 100 francs back from the clerk?

If I don't tell Carol about the money, then that's eight hundred for her and nine hundred for me. But then if Dad hears about it...”

A. Decide whether the following statements about the text are true (T) or false (F).

1. Carol and Martin want to find a job in Switzerland.  
   T  F
2. They needed money to pay for the trip.  
   T  F
